

LISTING OF THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A token issuance and binding process comprising:
providing a plurality of tokens, each token having a unique ID number stored therein;
generating a unique public/private key pair for each token;
storing each token ID number and corresponding public key in a directory/database;
storing each private key in its respective token; ~~and~~
binding a unique ID number of a user to a corresponding one of the plurality of tokens by
storing said correspondence there between in the directory/database; and
reviewing, by a Tokenizing Officer, credentials of the user and forwarding the user ID
number and the token ID number to a CMS (Certificate Management System) along with an E-
form (electronic form) request and signature of the Tokenizing Officer, wherein the Tokenizing
Officer comprises a person.
2. (Canceled).
3. (Previously Presented) The process of claim 1, the binding further comprising the CMS
checking for redundant user tokens and revoking any such user tokens.
4. (Original) The process of claim 3, the binding further comprising the CMS filling in the E-
form from its directory/database and forwarding the filled in E-form to the Tokenizing Officer.

5. (Previously Presented) The process of claim 4, the binding further comprising the Tokenizing Officer reviewing data in the filled in E-form and comparing against the user credentials and returning same to the CMS after signing.
6. (Original) The process of claim 5, the binding further comprising the CMS validating the Tokenizing Officer's signature and generating and wrapping at least a signature certificate/private and associated private key for the user in the unique public key of the token and returning same to the Tokenizing Officer.
7. (Original) The process of claim 6, the binding further comprising the Tokenizing Officer storing the signature certificate/private key for the user in the token.
8. (Original) The process of claim 7, the binding further comprising the user unwrapping the signature certificate/private key using the token private key stored in the token.
9. (Original) The process of claim 1, wherein providing a plurality of tokens comprises providing a plurality of USB (Universal Serial Bus) tokens.
10. (Original) The process of claim 1, wherein providing a plurality of tokens comprises providing a plurality of smart cards.

11. (Previously Presented) A PKI (Public Key Infrastructure) system comprising:
 - a plurality of tokens, each token having a unique ID number stored therein;
 - a CMS (Certificate Management System) facility including a first interface to read data from said plurality of tokens and to write data to said plurality of tokens and including a directory/database; and
 - a badging facility including a terminal operatively connected to communicate with said CMS and including a second interface to read data from said plurality of tokens and to write data to said plurality of tokens;
 - wherein said CMS generates a unique public/private key pair for each token and stores each token ID number and corresponding token public key in said directory/database and stores each token private key in its respective token; and
 - wherein a Tokenizing Officer utilizes said terminal in said badging facility to forward a unique ID number of a user to which a particular token is to be issued along with the unique ID number of said particular token to said CMS and wherein said CMS binds the unique ID number of said user to said particular token ID number by storing the correspondence there between in said directory/database, wherein the Tokenizing Officer comprises a person.

12. (Previously Presented) The system of claim 11, wherein said Tokenizing Officer reviews credentials of said user and forwards the user ID number and token ID number to said CMS along with an E-form (electronic form) request and signature of said Tokenizing Officer.

13. (Original) The system of claim 12, wherein said CMS checks for redundant user tokens and revokes any such user tokens.
14. (Original) The system of claim 13, wherein said CMS fills in the E-form from said directory/database and forwards the filled in E-form to said Tokenizing Officer.
15. (Previously Presented) The system of claim 14, wherein said Tokenizing Officer reviews data in filled in the E-form and compares against the user credentials and returns same to said CMS after signing.
16. (Original) The system of claim 15, wherein said CMS validates said Tokenizing Officer's signature and generates and wraps at least a signature certificate and associated private key for said user in said unique token public key of said particular token and returns same to said Tokenizing Officer.
17. (Original) The system of claim 16, wherein said Tokenizing Officer stores the signature certificate/private key for said user in said particular token.
18. (Original) The system of claim 17, wherein said user unwraps said signature certificate/private key using said token private key stored in said particular token.
19. (Original) The system of claim 11, wherein said plurality of tokens comprises a plurality of USB (Universal Serial Bus) tokens.

20. (Original) The system of claim 11, wherein said plurality of tokens comprises a plurality of smart cards.
